

CURRICULUM ALIGNMENT GUIDE

Computing programmes of study:

KEY STAGE 2

National curriculum in England

OVERVIEW

100 Ideas for Secondary Teachers: Outstanding Computing Lessons

INTRODUCTION

100 ideas: Outstanding Computing Lessons is a collection of 100 practical, tried-and-tested ideas for teaching computing. It is aimed at computing / ICT teachers of all levels, whether specialist or non-specialist, newly qualified or experienced.

For more information on 100 Ideas: Outstanding Computing Lessons and to find additional education resources and supporting materials, including more than 50 worksheets to accompany the activities in the book, visit: teachwithict.com/100ideas

10 sample activities can be downloaded for free at teachwithict.com/bonus

KEY STAGE 2

YEARS 3, 4, 5 AND 6 PROGRAMME OF STUDY

- 2.1** Design, write and debug programs that accomplish specific goals, including controlling or simulating physical systems; solve problems by decomposing them into smaller parts.
- 2.2** Use sequence, selection, and repetition in programs; work with variables and various forms of input and output.
- 2.3** Use logical reasoning to explain how some simple algorithms work and to detect and correct errors in algorithms and programs.
- 2.4** Understand computer networks including the internet; how they can provide multiple services, such as the world wide web; and the opportunities they offer for communication and collaboration.
- 2.5** Use search technologies effectively, appreciate how results are selected and ranked, and be discerning in evaluating digital content.
- 2.6** Select, use and combine a variety of software (including internet services) on a range of digital devices to design and create a range of programs, systems and content that accomplish given goals, including collecting, analysing, evaluating and presenting data and information.
- 2.7** Use technology safely, respectfully and responsibly; recognise acceptable/unacceptable behaviour; identify a range of ways to report concerns about content and contact.

PART 1: PROGRAMMING STRATEGIES

IDEA	DESCRIPTION	STANDARDS
001	Paired programming – A research-driven coding strategy for helping novice learners.	2.1
002	Rubber duck debugging – A programming strategy used to help students find bugs and in their code.	2.1, 2.3
003	Code golf – A programming strategy to help students create more efficient code.	2.1, 2.2
004	Game design – Using games as a hook to encourage students to learn how to code.	2.1
005	PRIMM – A research-based approach to teaching coding and for reducing cognitive load.	2.1, 2.3
006	Parsons problems – Help students learn how to code by removing some of the barriers.	2.1, 2.3
007	Use-modify-create – Reduce anxiety while supporting growth with this simple three-stage approach to learning to code.	2.1, 2.3
008	Hour of Code – Give your students a ‘byte’-sized introduction to computer science with an hour of code.	2.1, 2.2
009	Code bug – Build resilience and reduce anxiety when teaching children to code by purposely introducing ‘bugs’ early on in the learning process.	2.3
010	Code combat – Put your students’ coding skills to the test by pitting them against each other in code combat!	2.1, 2.2
011	Teaching with robots – Coding can often be difficult for students to grasp. Robots can provide a simpler, more tangible introduction to programming.	2.1, 2.2

PART 2: COMPUTING STRATEGIES

IDEA	DESCRIPTION	STANDARDS
012	Take your screwdrivers to work – Students explore how computers work by taking old devices apart.	
013	DART your students – A strategy designed to improve students' reading comprehension.	
014	Contextualise learning – Explore strategies for making computing relevant and provide 'real-life' learning experiences for students.	
015	Go unplugged – Teaching computing without computers.	
016	Socratic debate – Students debate the social, ethical, and legal issues surrounding the use of computers.	
017	Peer instruction – A research-driven approach to teaching difficult concepts that students often misunderstand.	
018	Game-based learning – Exploring the use of games, such as Minecraft: Education Edition, to teach children how to code.	
019	Using QR codes – Using QR codes to teach computing theory.	
020	Escape rooms – Students must solve a series of binary puzzles to open physical locks and stop a simulated 'virus attack'.	
021	Blogs and wikis – Using blogs and wikis to teach computing theory.	
022	Flipped learning – Reversing the traditional way of teaching to make better use of classroom time.	
023	Guided discovery – An inductive approach to teaching and learning where students take an active role in discovering knowledge and developing understanding for themselves.	

PART 3: ICT AND DIGITAL LITERACY

IDEA	DESCRIPTION	STANDARDS
024	Fake news – Students learn how to identify ‘fake news’ articles before creating their own fake news story.	2.7, 2.5
025	Copycat – A fun activity that teaches students about copyright, public domain, fair use, and Creative Commons.	2.7
026	Mario Kart™ spreadsheets – An example of how to use game-based learning to teach students essential spreadsheet skills.	2.6
027	Fakebook – An ‘escape room’ challenge which helps students understand the importance of protecting their online presence.	2.7
028	Database detectives – Students test their sleuthing skills with this ‘whodunnit’ themed database challenge.	2.6
029	Did you meme it? – Students explore the purpose and ethics of memes before creating their own meme on an agreed topic.	2.7
030	Videography – Students create a YouTube-style instructional video whilst also explore the importance of concise instructions (algorithms).	2.6
031	Infographics – Students create infographics about their mobile phone habits.	2.6
032	Dragon’s Den – Students work as a team to design an innovative solution to a global problem.	2.6
033	Wayback Machine – Students learn about their digital footprint and the long-lasting impact of their online actions.	2.7

PART 4: COMPUTING ACTIVITIES

IDEA	DESCRIPTION	STANDARDS
034	What a waste – Students, working in teams, explore innovative ways to reduce e-waste.	2.6
035	Role reversal – Students take on the role of a teacher.	
036	Storage Top Trumps® – Students explore different storage devices before creating a game of Top Trumps® based on what they have learned.	
037	Little Man Computer – Students explore ‘Little Man Computer’ – a simulator that models the basic features of a modern computer that uses Von Neumann architecture.	
038	Features of a CPU (a lesson using DART) – Students explore the main features of a CPU.	
039	Internet of things – Students design a ‘smart home’ that utilises the internet of things.	
040	The great input/output QR hunt – Students complete a QR hunt to discover facts about different input and output devices.	
041	Moral machine – Students explore the ethics behind creating AI for self-driving vehicles.	

PART 5: COMPUTATIONAL THINKING

IDEA	DESCRIPTION	STANDARDS
042	Making the tea algorithm – Students explore the importance of creating precise instructions by creating an algorithm for making a cup of tea / coffee.	2.1, 2.3
043	Teaching with magic – Using magic to teach computational thinking skills.	2.1, 2.3
044	Crazy characters – Students write an algorithm for drawing a monster.	2.1, 2.3
045	Puzzle me – Using puzzles to practise computational thinking skills (decomposition, pattern-matching, abstraction and algorithm design).	2.1, 2.3
046	Human robot – Exploring algorithms through physical activities such as movement and dance.	2.1, 2.3
047	A-maze-ing algorithms – Students explore the importance of clear and precise instructions by writing algorithms to solve a simple maze.	2.1, 2.3
048	20 questions – Students explore the efficiency of different search algorithms by playing a game of ‘20 questions’.	
049	Breaking the code – Students develop their problem-solving skills with a series of code-breaking challenges.	
050	Origami algorithms – Students write algorithms for folding a paper aeroplane or origami animal.	2.1, 2.3
051	Guess the object – Getting students to model, draw or mime a variety of different objects can help them to understand the concept of abstraction.	2.3

PART 6: UNPLUGGED ACTIVITIES

IDEA	DESCRIPTION	STANDARDS
052	Image compression – Students learn about lossless compression without the use of a computer.	
053	Bubble sort dance algorithm – Students learn how a bubble sort algorithm works is via the medium of Hungarian folk dance!	
054	World Wide Web unplugged – Students role-play what happens when a user enters an address in a web browser.	2.4
055	Intelligent piece of paper (AI) – Exploring artificial intelligence (AI) with a game of Tic-Tac-Toe.	2.1
056	Envelope variables – Demonstrate a simple program that uses variables and assignment by running them on a computer made entirely out of students.	2.2
057	Card sort – Students explore three common sorting algorithms (bubble, merge, and insertion) by sorting playing cards.	
058	Binary representation of images (unplugged) – Students explore how a computer represents images using binary.	
059	How computers work – Students take on the role of various parts of a computer and simulate the running of a simple program.	
060	Memory unplugged – Students explore how data is transferred between different storage locations inside a computer, such as RAM, cache memory, secondary storage and virtual memory.	
061	Network topologies – Using string and various other household objects, students simulate the three most common network topologies.	2.4

PART 7: DATA REPRESENTATION

IDEA	DESCRIPTION	STANDARDS
062	Binary addition – Students learn how to add two numbers using binary.	
063	Binary numbers – Students learn about binary.	
064	Binary representation of images – Students explore how a computer represents images using binary.	
065	Binary representation of sound – Students explore how a computer represents sound using binary.	
066	Binary bingo – A fun strategy to test students' understanding of binary representation of numbers.	
067	It's all about hex – Students learn about the hex numbering system.	
068	ASCII 'secret' agent – Students explore how a computer represents text using binary by solving (and creating) as series of coded messages.	

PART 8: EXAM PREPARATION

IDEA	DESCRIPTION	STANDARDS
069	Padlet – Using online curation tools, such as Padlet, to collating resources in preparation for exams.	2.6
070	Round-robin revision – Make revision fun and engaging with a series of mini games.	
071	Revision podcasts – Create revision resources that students can listen to anytime, anywhere!	2.6
072	PEE (point, evidence, explain) – A simple strategy to help improve the quality of written answers to exam questions.	
073	PechaKucha – A great way to encourage students to be more concise and a little more creative with their presentations.	2.6
074	Sketch-noting – A great way to empower students and allow them to synthesise information visually.	2.6
075	Command word bingo – A simple starter activity that will pay dividends at exam time!	
076	BUG hunt – A technique for helping students understand thoroughly what is expected of them during exams.	
077	Tweet IT – A fun revision strategy that will help students to remember key information.	
078	Revision speed dating – A fun and engaging activity that gets students talking.	
079	Match IT – Make revision engaging and memorable by turning it into a game!	

PART 9: PROGRAMMING ACTIVITIES

IDEA	DESCRIPTION	STANDARDS
080	Magic 8-ball® – Students create a Magic 8-ball® game using python.	
081	Shakespearean insult generator – A fun way to introduce lists and file-handling in python.	
082	Chatting robot – Students learn how to create a ‘rule-based’ chat bot using python.	
083	Just dance – A lesson which uses dance as a medium for introducing key programming concepts to children.	2.1, 2.2, 2.3
084	Adventures in text – Students learn how to create an 80s-style text adventure game in python.	
085	Mad Libs® – Students code the popular phrasal template word game in python.	
086	Sorting Hat – Students create a Harry Potter-style sorting hat in python.	
087	Turtle power (a lesson using PRIMM) – Students learn how to create regular polygons using the turtle library in python.	2.1, 2.2, 2.3
088	Guess my number – A fun programming challenge which teaches concepts such as variables, data types and selection.	
089	Mind-reading algorithm – Students learn how to create a mind-reading game in python.	
090	Cat and mouse – A simple cat and mouse game using Scratch.	2.1, 2.2, 2.3
091	Reaction timer – Students create a simple reaction timer using python.	

PART 10: COMPUTING AND STEAM

IDEA	DESCRIPTION	STANDARDS
092	Art attack – Using art as a creative medium for exploring complex concepts in computing.	
093	Lights, camera, action – Students learn how to create light art using slow shutter speed photography and code.	2.1, 2.2, 2.6
094	Making music – Students learn how to create music with code.	2.1, 2.2, 2.3
095	Coding probability – Students explore probability, including relative frequency, with code.	
096	Physical computing – Exploring how to teach coding using physical devices.	2.1, 2.2, 2.3
097	Turtle snowflakes – Students learn how to code snowflakes using the turtle library in python.	2.1, 2.2, 2.3
098	Coding the weather – Students learn how to manipulate ‘real’ weather data using python and OpenWeather data.	
099	Rubbish robots – Students are challenged to build a robot using general household objects and electronic components.	2.1, 2.2, 2.3
100	Color splash – Students learn how to create colour splash images using a free online image editor.	2.6

PART 11: BONUS ACTIVITIES

IDEA	DESCRIPTION	STANDARDS
101	What's your elf name? – Students create a name generator using python.	
102	Guess / _ _ e / word – Students create a hangman style word game using python.	
103	Cards against humanities – Students code a phrasal template word game in python.	
104	Shakespearean complement generator – Coding challenge based on the Shakespearean sonnet 'Shall I compare thee to a summer's day?'	
105	Hacking the news – Hacking the news with HTML.	2.1, 2.7
106	Data science detectives – Teaching computational thinking using historical data.	
107	Code tracing – A simple strategy for reducing cognitive load.	2.1, 2.3
108	Make me happy – Students create an AI powered sentiment analysis bot using Scratch.	2.1, 2.2
109	Worked examples – An effective strategy for reducing cognitive load for novice learners.	2.1, 2.3
110	Team teaching – Tips for planning a lesson with a colleague.
